

BITE-CHEK®

New Dispenser

At Microcopy, we are always striving to make dentistry easier. The new box design dispenses BITE-CHEK without risking contamination to the rest of the box during the procedure. This new dispenser makes it easy to retrieve a BITE-CHEK, and prevents contamination to the patient.

- Box will dispense small quantities for ease of use.
- Store at room temperature.
- Single-patient-use. 

	Part Number	Quantity	Film

Always Ready

For many dental visits the first stop is with the hygienist. During this cleaning there may be sealants, complaints about tooth pain, or an implant may need to be checked for contact pressure. These may require the hygienist or doctor to check the occlusion. Keeping forceps by the chair many times is impractical, so the hygienist must leave to retrieve them, all the while the patient and the doctor are waiting.

Occlusion is fundamental to dental procedures and maintenance, so why not make it more efficient? BITE-CHEK — the perfect assistant for checking occlusion.

- ✓ No mess
- ✓ Cut down on sterilizing forceps and scissors
- ✓ Hygienist Friendly — keep at all stations

Ready to use easy-grip handle requires no forceps

Handle keeps gloves clean No risk of biting metal forceps Thin film makes accurate marks

Made to fit the curve of the oral cavity

Family History

Microcopy defined innovation when the first batch of INSTA-NEG® and INSTA-FIX® solutions for rapid film processing was bottled back in 1970. Our company continued that winning streak with the introduction of the market-leading NEODIAMOND® burs. Follow-through products included NEOBURR® carbides, NEODRYS® super absorbents, GAZELLE® and MINNOW™ nanocomposite polishers. Quality and patient-safety have been the hallmarks of Microcopy since we began.

There's no question — Microcopy products and your practice are a winning combination.

Our Articulation Film Advantage

BITE-CHEK accurately marks the points of contact, minimizing the possibility of “too high” an occlusion and possible post-operative tooth sensitivity. Contrary to many thicker paper options on the market today, our film’s thin profile helps patients close their bite completely, eliminating mandibular reflexes that can skew the occlusion. The result is a small mark that makes adjustment accurate. The new Red/Black film makes it possible to mark both occlusion and excursion. BITE-CHEK with its easy-grip handle is the ideal tool for precise occlusal adjustments.

Bite-Chek Articulating Film:

- ✓ Thin film marks high points accurately – use on a dry surface.
- ✓ Stretches without snap back or tearing to prevent false marks.
- ✓ Marks all surfaces: enamel, metal, non-metal restorations, & plastic.
- ✓ Is available in Black/Black and Red/Black film.
- ✓ Marks both arches at once with its double-sided film.
- ✓ Red/Black film shows contrast of centric and eccentric contacts.

Instructions

Dry the tooth surface.

Position so film is on the teeth facing the center of the mouth.

Check occlusion.

Adjustable Full Arch

With the patented easy-grip handle, Bite-Chek is also used to mark the full arch by holding two side-by-side as shown. The angle can be adjusted to fit the width of the arch.
