## MICROCOPY

# Minimally Invasive SPU Burs Shape the Way

Microcopy takes the bar and raises it even higher with its newest NeoDiamond Minimally Invasive burs, a single-patient-use line of burs tailor-made for conservative dentistry

They say there's nothing more dangerous than a dull scalpel. "The same can be said for dental burs," said Dr. Anthony DeSantis, who is a big fan of using NeoDiamond burs for his crown and bridge preps, as well as for finishing restorations. "Knowing that each bur is sharp and will cut predictably and efficiently without adding excess heat is comforting and helps me provide faster, safer, and more efficient tooth preparation," he added.

### Meet the Newest NeoDiamond

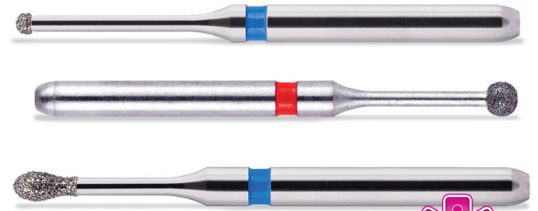

Speaking of safe and efficient, Microcopy has debuted a new bur design that expertly blends the benefits of a strong and sharp single-patient-use diamond bur with the industry-wide move to more conservative, minimally invasive dental treatments.

NeoDiamond Minimally Invasive burs benefit patients in 2 unique ways: they treat dental issues, and they help keep natural tooth structure intact. It's a method proven to offer healthier teeth, quicker recoveries, and more successful patient outcomes.

### Choose from Over a Dozen Shapes

Available in 17 shapes, the ultrathin, long-neck NeoDiamond Minimally Invasive burs allow for precise cutting and conservative openings, along with better visibility and access during dental procedures. With

necks measuring just 0.71 mm, these new burs are especially suitable for delicate, detail-oriented procedures.

Here's a snapshot of what NeoDiamond Minimally Invasive burs can do:

- **Cavity Prep:** Target only decayed tissue while preserving surrounding healthy enamel.
- **Conservative Restorative Procedures:** Gently repair decayed or damaged teeth with less drilling and an increased focus on preservation.
- **Preparation for Bonding:** Create a perfect bonding surface that improves the esthetics and durability of fillings, veneers, and crowns.
- **Root Canal Access:** Get access to the treatment site with less tooth removal and minimal disruption to the surrounding area.
- **Removal of Stains and Discoloration:** Gently eliminate surface stains and discoloration without aggressive grinding.
- **Filling Adjustments:** Fine-tune fillings for an ideal fit and feel, ensuring a perfect bite.
- **Sensitivity Treatment:** Address enamel wear and sensitivity-causing erosion without excessive tooth structure removal.
